YOLOv8 and YOLO26

Additional experiments on the same coin dataset, using the same settings as the YOLOv10 / YOLOv11 runs: imgsz 448, batch 16, 100 epochs, seed 0, default augmentation (script: scripts/train_compare.py).

Dataset note. These runs used 4,665 training and 998 validation images. 15 images with empty label files (12 train, 3 val) were removed. The validation set still contains 6,683 instances, the same as above.

Metrics. The per-model pages report the validation results of the best checkpoint (best.pt), as in the earlier pages. The last column is the mAP50 of the final epoch, which is the value used for the ranking in results/comparison.md.

Top-3 by mAP50 (final epoch) among these models: **Yolov8n** (0.9467), **Yolov8s** (0.9444), **Yolo26s** (0.9399). Their per-class AP is on the last page.
